

**Amendments to the Specification**

Jmc  
8/10/07

Please replace the paragraph at page ~~9~~<sup>8</sup>, lines ~~3~~<sup>15</sup> through ~~7~~<sup>19</sup> with the following amended paragraph:

State of charge (SOC) is a measure that characterizes electrochemical states of a cell after a charging or discharging process. For example, assume that the full capacity of a cell is 'z' Ah (Ampere-hour). After discharging 0.5z Ah capacity from the fully charged state, the state of charge of the cell is 50%. Likewise, after discharging 0.25z Ah capacity from the fully charged state, the state of charge is ~~[[25%]]~~ 75%, and so on.
